FOR A UNIQUE VISUAL EXPERIENCE. Push your limits Over a century of experience in developing optical devices, microscopes, and cameras reaches its peak today with a new family of premium Leica binoculars: the Noctivid binoculars. Compact, elegant, and stylish yet robust and resilient.

DESCRIPTION

Leica Noctivid 10x42

Thanks to a 10x magnification, the Leica Noctivid 10x42 allows for optimal detail viewing. The excellent suppression of stray light and strong contrasts enable the recognition of even the most subtle structures, even in particularly poor conditions. The short close-focus limit offers a view as detailed as in macro, and the generous field of view guarantees an overview over long distances. The compact design and optimal weight distribution ensure relaxed observation without the risk of fatigue. A tactile rubber armor provides a pleasant touch while the special, highly durable patented coating offers additional protection to the magnesium housing's metal surfaces.

FOR A UNIQUE VISUAL EXPERIENCE

THE PERFECT BALANCE

Exhilarating contrasts, brilliance, and absolute clarity

In terms of optical values, the Noctivid binoculars bring together the best of proven technologies and the latest technical innovations. Already used in the prisms of Leica Ultravid HD-Plus binoculars, the high-

transmission Schott HT™ glasses ensure very good transmission on the Noctivid as well, as well as colors of barely believable naturalness.

A WELL-THOUGHT-OUT COMBINATION

Diverse technologies, innovative concepts

The latest optical calculations, carefully combined with modern and exemplary quality glasses, allow for an image that almost has the same effect as 3D. With striking contrasts and a vision of absolute precision and no compromises, hyper-fast focusing possibilities, a long eye relief, and a generous eyepiece, seeing will take on a whole new meaning for you.

ROBUST AND RESILIENT

Usable in all circumstances

Just by their design, these binoculars set new benchmarks. Slim, their tubes can be changed in the blink of an eye. Thanks to a short design, the weight distribution is ideal, resting mainly in the center of the palm and thus allowing for observation without the risk of fatigue.

TECHNICAL SPECIFICATIONS

Magnification	**10x**
Diameter	**42 mm**
Brightness	**4.2 lg**
Field of view at 1000 meters	**112 m**
Minimum focus	**1.9 m**
Eyepiece relief	**19 mm**
Pupil distance (mm)	**56-74 mm**
Height & width	**150x124**
Weight	**860 g**
