Discover the world of plants and insects with the famous folding magnifiers from KITE OPTICS. Fully made of aluminum and featuring aspheric lenses, they offer an unparalleled visual experience.

DESCRIPTION

Small folding magnifier for inspecting plants, insects, etc. with integrated LED lamp.

The triplet lens consists of three stacked lenses to produce better image quality than the doublet lens. The image is corrected for three colors and shows little to no distortion. The higher the magnification, the better this advantage.
