The marine binocular series showcases our commitment to quality, innovation, and choice. Whatever model you choose, each instrument has been specially designed and manufactured to meet the most demanding performance criteria.

DESCRIPTION

The unique features and optical configuration of the Natura BGA WP DC 8x42 monocular provide coast guards, surveyors, and marine observers with the ability to locate, observe, and record the distance and bearing of objects on land and at sea.

Features

- High-quality roof prism with ED glass objective
- Phase-corrected PC prism with high light transmission Oasis prism coating
- Fully multi-coated lenses
- Nitrogen-filled waterproof construction with textured rubber finish for added protection
- Integrated compass and distance scale
- Wide-angle eyepiece with long eye relief for eyeglass wearers
- 4-stage retractable eyecup
- Close focus with sharpness distance scale 35m/115ft. Close focus 7m/23ft.

The ED glass objective, PC Oasis prism, and high light transmission multi-coatings maximize the ability to see details in low light conditions.

The projected mil scale reticle in the eyepiece allows for measuring the distance to an object if the height is known, as well as its height and width if the distance is known. The floating compass at 360° allows for taking a bearing of +/- 20° from horizontal.

Fully rubber-coated and nitrogen-filled, the roof prism minimizes size and weight, allowing for one-handed use in most situations. For stable hands-free observation, the monocular can be directly screwed onto any tripod or monopod with a compatible ¼" thread.

Supplied accessories

The Natura BGA WP DC monoculars come in a soft case with a wrist strap, a neck strap, a rubber eyecup, and a rubber objective cover.

TECHNICAL SPECIFICATIONS

Magnification	8 x
Diameter	42 mm
Brightness	5.25 lg
Field of view at 1000 meters	129
Minimum focus	35 m
Eyepiece relief	22
Dimensions	Large format
Height & width	158x62 mm
Weight	342 g
