Forest carbon tripod for outdoor use.

DESCRIPTION

Forest Carbon 22-4 tripods, with case

In brief:

- 4-section carbon tripod **with 10 layers**
- Central column angle adjustment system
- Semi-automatic angle stop
- Tripod leg locking mechanism, with just a ¼ turn

Tripod with integrated ball head

This model features an integrated hollow ball head, which completely eliminates the limitation of the straight central column and can move and adjust the angle as freely as a ball head. The stability of observation with binoculars or a spotting scope starts with a rock-solid tripod. With its low weight and versatile stability, the Forest tripod will become the new standard for outdoor tripods.

Central control locking system

The central control locking system offers a good hand feel. Faster locking system that only requires a half turn.
