The Nomad-4 is a high-quality telecentric focal multiplier, ideal for visual observation and astrophotography.

DESCRIPTION

Premium quality - uncompromising performance!

The **NOMAD-4** is a high-end, versatile optical accessory designed for visual observation and astrophotography.

Visual observation: Used as a Barlow lens with an eyepiece, it **multiplies the magnification by 4**. Its high-index glass lenses, featuring multi-coatings, ensure excellent transmission and great sharpness. It has a self-centering brass clamp ring that protects the eyepieces, as well as a captive retaining screw.

Astrophotography: Its optical system with **4 lenses** ensures excellent chromatic correction and very good flatness of the field. It is ideal for capturing high-resolution images of the Moon and planets while preserving the apochromatic performance of ED glasses. A CCD camera can be directly attached with the supplied adapter. A DSLR can also be mounted with the dedicated adapter provided (M48×0.75 ring required).

The **NOMAD-4** thus constitutes a particularly versatile accessory for any astronomer looking to optimize their observations and imaging.

Features

- **Magnification:** 4×

- **Optical design with 4 elements**
- **Self-centering brass clamp ring**, protecting the eyepieces from scratches
- **Individually optimized multi-coatings** and high-quality optical glasses
- **Blackened edges of the lenses** and anti-reflective treated threads to reduce stray reflections
- **Compatible with 2" and 1.25" eyepieces** (1.25" adapter included)
- **CCD adapter included**
- **Adapter for DSLR included**, with M48 × 0.75 thread
A corresponding M48 adapter ring for the camera mount is required.
- **Secure clamping screws**
- **2" (50.8 mm) barrel connection** with thread for 2" filters
- **Safety groove** on the barrel
- **Metal body**
- **Weight:** 405 g (without accessories)

Delivery contents

- 4× Barlow lens
- Adapter for 1.25" eyepiece
- CCD/DSLR adapter ring
