Availability	**in stock: Geneva / dispatched within 24 h**
Item ref. (SKU)	20528

This deluxe achromatic finder offers a perfectly straight and upright image, with a reticle for precise targeting of the object.

DESCRIPTION

This achromatic finder **9x50 DX Deluxe** offers a perfectly straight image, with fully corrected left/right orientation, for particularly intuitive locating of celestial objects. Its crosshair allows for precise and reliable aiming.

Featuring a **magnification of 9×** and a **50 mm objective**, it benefits from fully multi-coated optics to ensure bright and contrasted images. Its collimation system is equipped with six knurled centering screws with nylon tips, designed to ensure precise adjustment while avoiding marking or damaging the optical tube.

Thanks to its design, this finder offers a significantly more comfortable and practical use than a traditional direct-view model.

The kit also includes a **finder dovetail mount**, compatible with standard **Synta/Sky-Watcher** bases.

Note that this is the same high-end finder originally supplied with the **Esprit-ED Super Apo** refractor series. It is an ideal complement to the **Sky-Watcher Evostar EDX and Esprit EDX** refractors, but can also be mounted on many telescopes from other brands equipped with a dovetail base of the same size.
